Intro

The *RUNNER* is a fashionable planter made of lightweight synthetic material and finished in a high gloss lacquer.

Each concept is pre-planted including all accessories such as granules, a practical waterproof liner and a water meter.

The *RUNNER* is available as all-inclusive set. Make a choice out of 30 different plants, divided into three categories; Standard, de Luxe and Premium.

All colours of rainbow

The *RUNNER* all-inclusive set is available in two different models and five popular colours: black, white, aluminium, anthracite and red.

But do you want a series of planters to match a particular colour? Besides the five standard colours mentioned above, the *RUNNER* is available in all RAL colours. These planters are just perfect for projects in which your customer's house style is the central point.

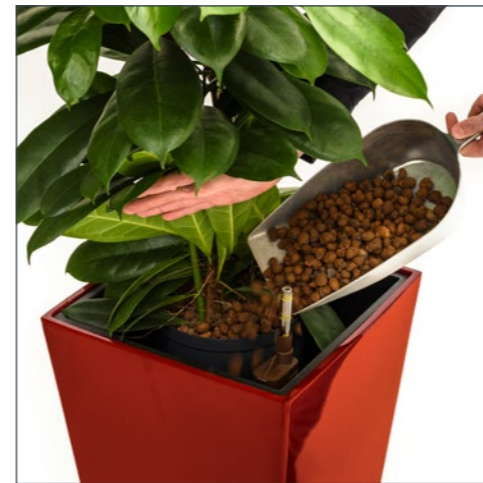

Practical liner (pre-planted)

The *RUNNER* comes with a practical waterproof liner. The practical liner is available for both hydroculture (⇅ 22 cm) and soil plants (⇅ 32 cm).

The all-inclusive set is pre-planted with hydroculture, in which the liner is already complete planted including all accessories. The pre-planted concept is still easy to lift up and saves you a lot of work. This means that an entire project can be carried out by a single person!

What is hydroculture?

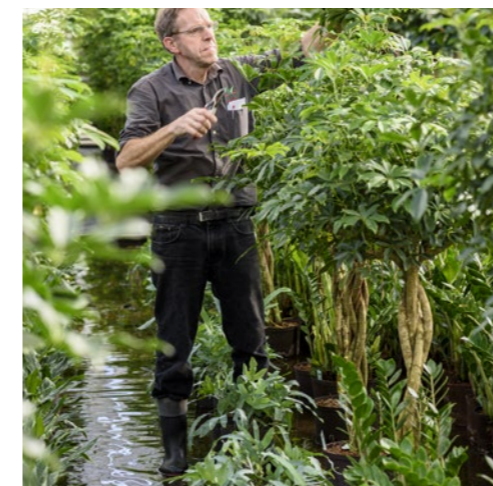

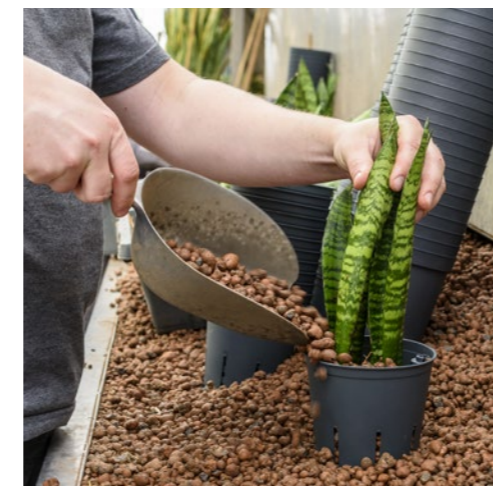

The popularity of hydroculture is increasing rapidly because it is easier to maintain than plants grown in potting soil. A plant grown using hydroculture only needs water once every four weeks.

This means that someone only needs to come along 12 times a year to look after your plants.

With hydroculture, the plants are grown with their roots in water. To this end, they are cultivated in a special pot with granules made from clay. Because of this airy substrate, the roots are able to take up sufficient CO₂ from the

air, so that they grow better which ensures a healthy plant. Hydroculture is also a lot cleaner. Not only for you, but also for the plant. Diseases and moulds are less likely to grow around the roots.

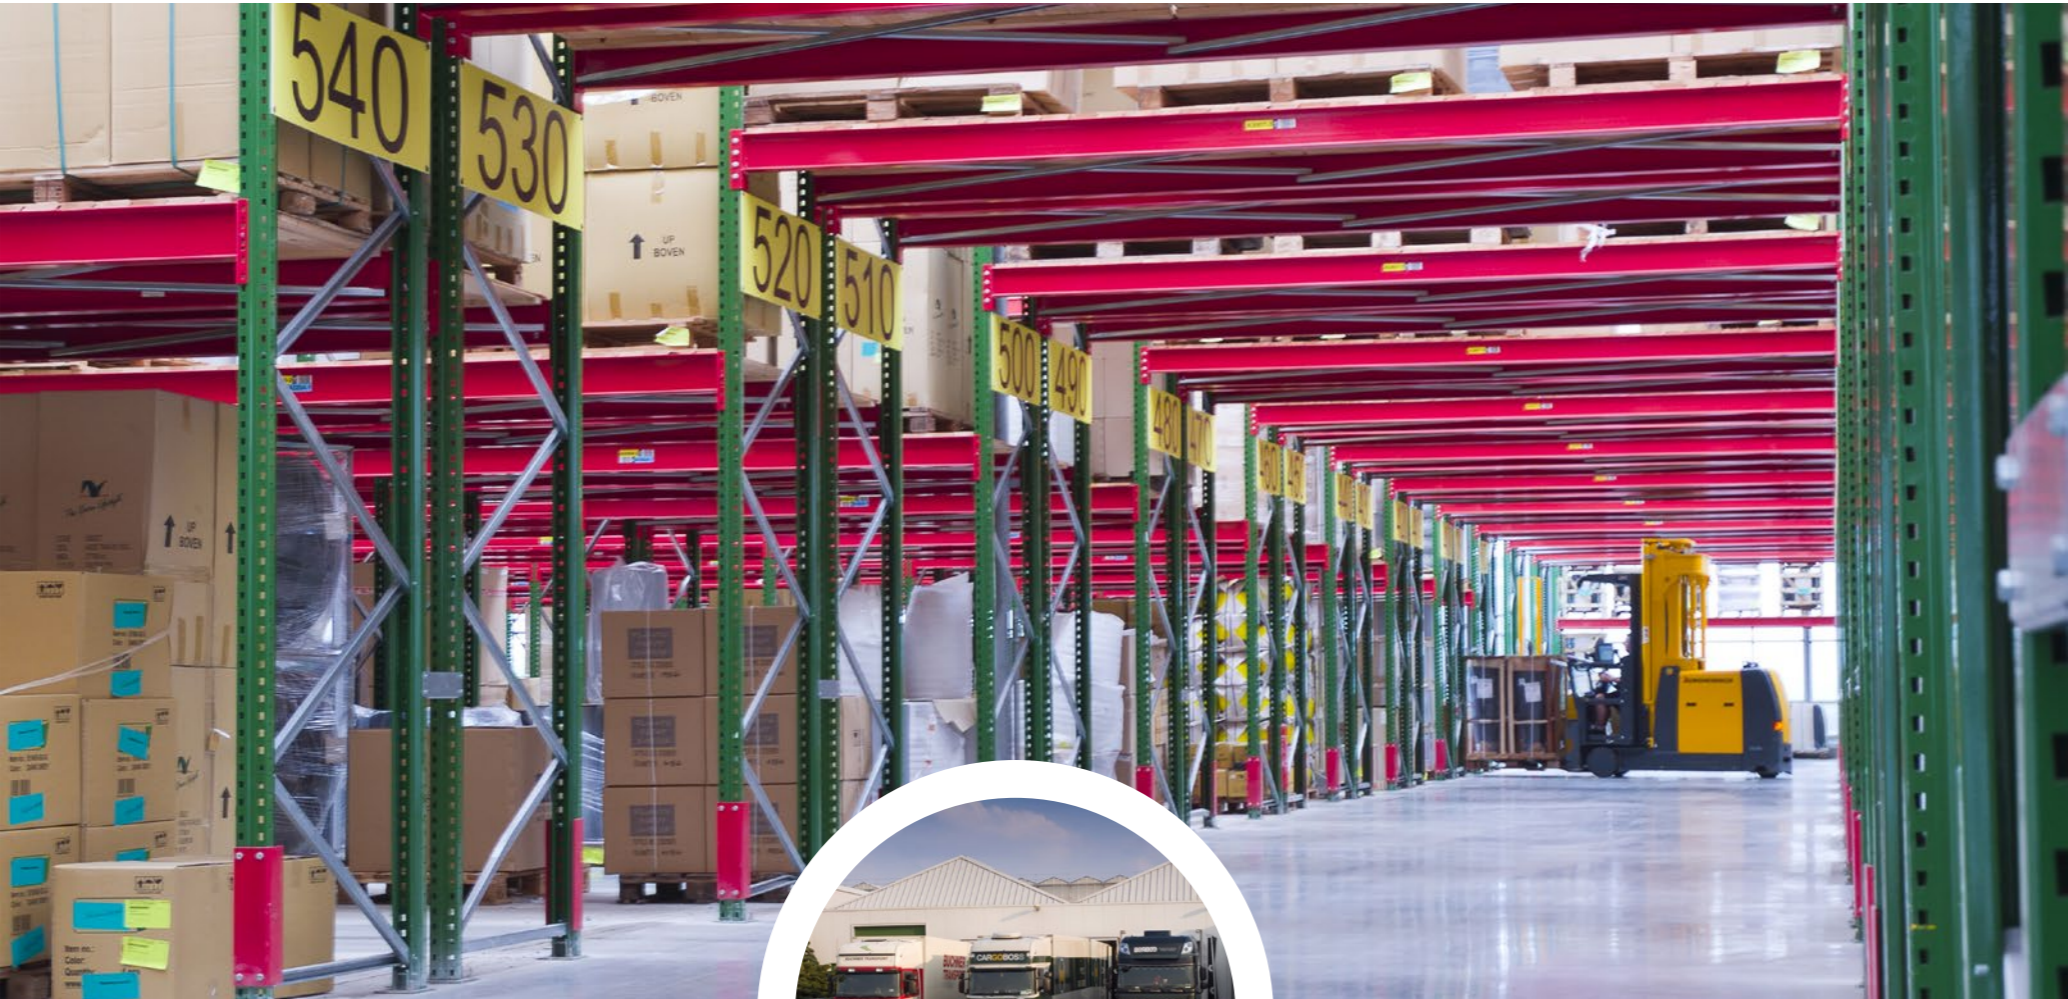

You can read when and how much water the plant needs using a water meter. When the level indicator shows, "min." it is not necessary to water your plant immediately, but wait three to four days before watering your plant again.

Logistics

We transport the *RUNNER* all-inclusive set in two separate parts; the planter and the pre-planted liner. You only need to lower the liner into the planter on location.

A logistics advantage is that we transport 81 planters on one pallet. And you can specify the different colours you want on the pallet.
