# Specifications

These planters are making a real comeback thanks to their sturdy and vintage character. Ceramics can be used both indoor and outdoor.

Ceramics pottery are made entirely by hand, according to traditional methods, in Vietnam and China.

Ceramics are fire resistant, an important characteristic given the increasingly stricter requirements imposed on shopping centres, hotels and office premises.

# Take a look behind the scenes

Our assortment of ceramic planters comprises a large number of models in various colours and dimensions. All this pottery is made by hand according to traditional methods. Take a look behind the scenes at how it is made.

There are various types of clay that are used in just as many different products. The coarser types are often used for making planters. Irregularities are removed from the clay and it is subsequently pressed into large blocks. Slices are cut from these blocks and placed in moulds by hand. Then it is a question of drying, the time this takes depending on the weather. In the rainy season, it takes longer because of the high air humidity. The mould is carefully removed, revealing the rough version of the planter, which is finished off using moist tools. A second drying time follows.

After a few days, the clay is dry enough to treat with the glaze. As soon as this is dry, the planters are placed in a wood-fired oven and the oven is bricked up except for a very small opening. Wood is fed in through this opening for 24 hours to keep the fire burning.

Its place in the oven ultimately determines the appearance of the ceramic planter. If it is close to the fire, the planter will shrink more and the colour will be intenser. Sparks from the fire create an unusual texture in the glaze. The potter has no control over this process, the result being that no two products are identical. Each planter is unique.

The planters have to cool down in the oven for at least 12 hours. Emptying the oven is a tough job and a very hot one since the planters still radiate heat that would delight the average sauna visitor.

Once they have cooled down and passed the last check, the planters are ready and are transported by sea container from Asia to Europe. Each individual planter will later form an exclusive element in a lovingly-created interior.

*The temperature of the oven is around 1,200 degrees Celsius*

# Online webshop

You can place your online order quickly and easily at [www.nieuwkoop-europe.com](http://www.nieuwkoop-europe.com). So you can do business whenever and wherever you like! Simply search for the code of the articles described here in the brochure and you will see our prices and stocks straight away.

You need login data if you want to use the webshop. Please contact us if you want to register.

Do you need help? We would be happy to give you a more detailed explanation of how to order online. Please do not hesitate to contact us immediately.

# Recommendations

## Indoor

- For soil**
- Fill up the planter with styrofoam, depending on the height of the planter.
  - Cover the remaining 35-cm with a waterproof liner or pond plastic.
  - Place a water meter on the bottom.
  - Place a 10-cm layer of granules.
  - We recommend using felt or separation-cloth between the granules and the soil.
  - Fill up the rest with soil and insert the plant in it.
  - You can cover the substrate with decorative stones if you like.

- For hydroculture**
- Fill up the planter with styrofoam, depending on the height of the planter.
  - Cover the remaining 23-cm with a waterproof liner or pond plastic.
  - Place a water meter on the bottom.
  - Insert the plant including the cultivation pot.
  - Fill up the rest with granules.
  - You can cover the substrate with decorative stones if you like.

## Outdoor

- We recommend to cover the hole in the bottom with felt or separation-cloth.
- Place a 10-cm layer of granules.
- We recommend using felt or separation-cloth between the granules and the soil.
- Fill up the rest with soil and insert the plant in it.
- You can cover the substrate with decorative stones if you like.
